

NAME

xclear – clear the terminal screen and purge scrollback buffer

SYNOPSIS

xclear

DESCRIPTION

A high-fidelity replacement for the standard **clear** utility.

Standard **clear** only moves the terminal cursor to the top line of the window, leaving historical command output intact within the scrollback buffer. This refined version visually clears the screen and immediately executes hardware-level ANSI escape sequences to flush the terminal emulator's scrollback memory entirely.

ESCAPE SEQUENCES

The tool relies on the following low-level terminal controls via **printf**:

\033c Resets the terminal device state to its default settings.

\033[3J

Purges the entire visible and invisible scrollback history from the host terminal.

INSTALLATION

Copy the script from the GitHub repository to your \$PATH, typically /usr/local/bin.
